Developer corrections - keep current design

French localisation and small work-rotation changes - updated review, 08 October 2026

Keep the current app design.

All revised visuals in this PDF were created with AI assistance. They are illustrative references, not final designs.

Keep the existing layout, colours, typography, icons and components. Apply only the requested translations and small functional changes. Do not rebuild the screens from these mockups.

01

Complete French localisation

Profile overview, chronotype, caffeine sensitivity, sports profile, weekly objectives, naps and visible work labels.

08

Direct custom rotation creation

Add the work-page shortcut. The developer should propose a polished integration within the current design.

09

Neutral rotation examples

Remove company names from example placeholders and use “Ex. : Mon tournus”.

10

Codes based on the user’s labels

Use the initial of the actual shift name and allow a per-day short-code override such as DN.

How to read this document

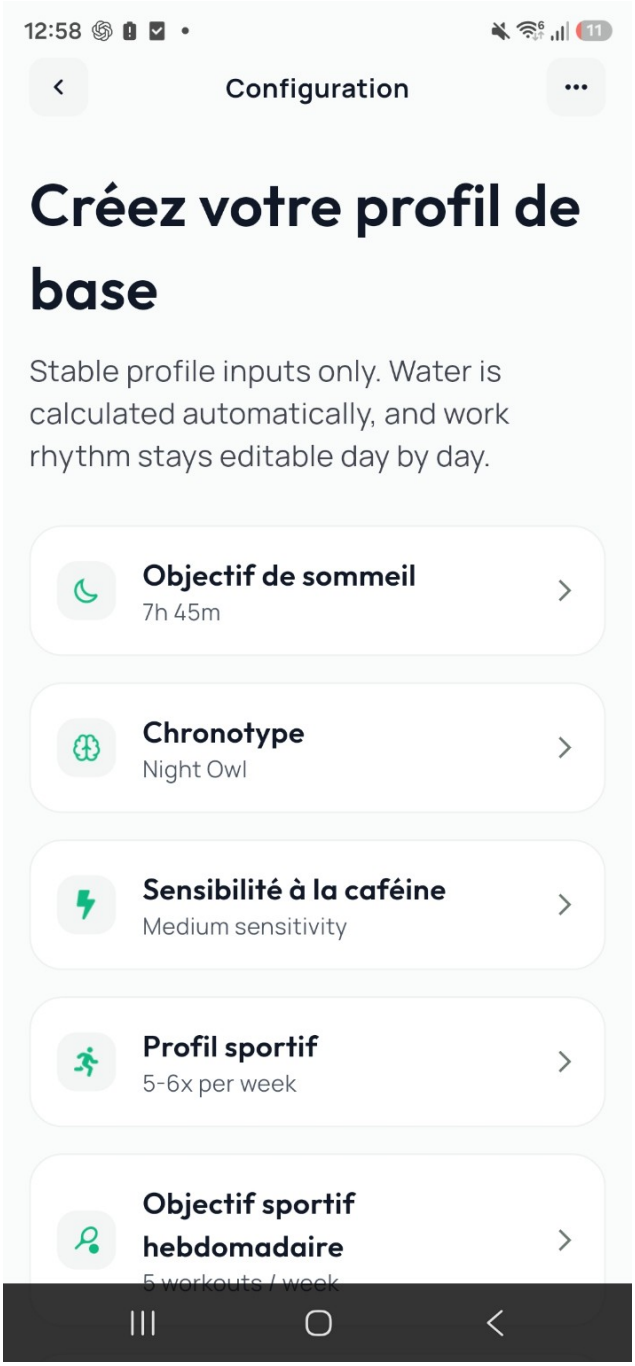

Pages 2-9 retain original points 01, 03, 04, 05, 06, 08, 09 and 10. Points 02 and 07 are removed. Pages 10-11 provide exact French copy; page 12 defines code behaviour and acceptance checks.

The original screenshots are the evidence. AI-assisted correction references explain the requested changes and must not be treated as replacement designs.

01 / Profile setup - upper section

AI-assisted correction references only. Keep the current app design.

BEFORE - SUPPLIED SCREENSHOT

Source: 1000069861.jpg

AFTER - AI REFERENCE / NOT FINAL

Keep the existing design - apply listed changes

WHAT TO CHANGE

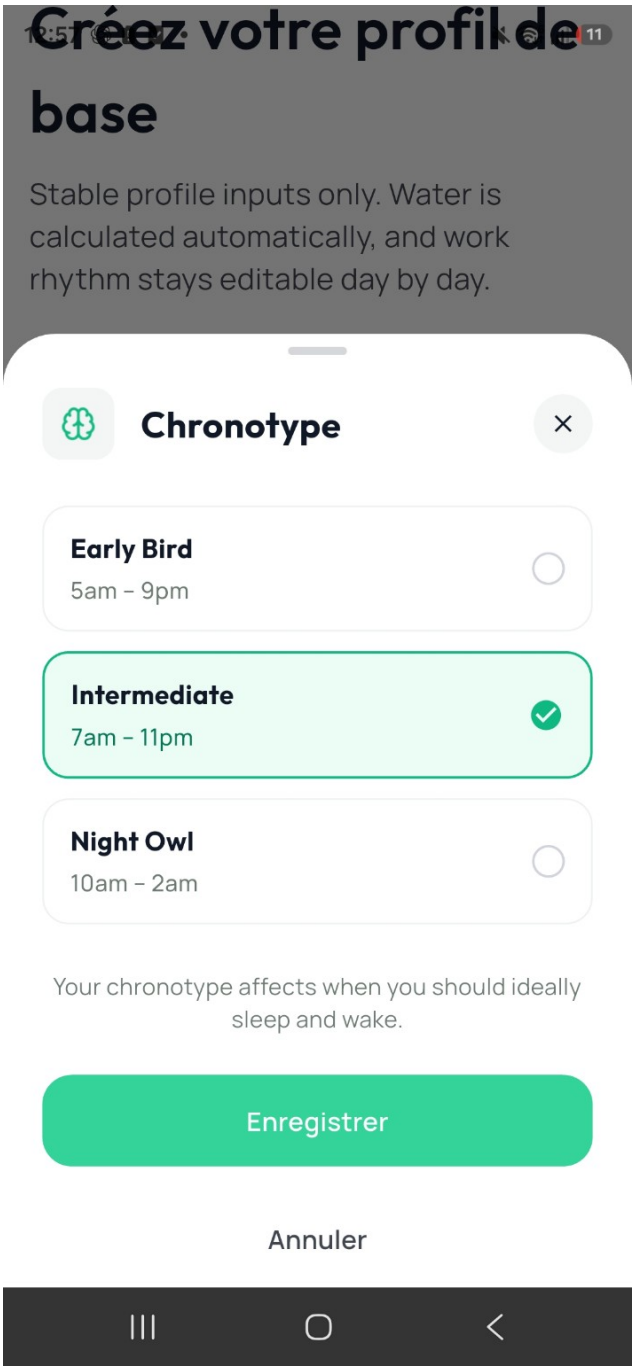

Localise all summaries. Translate the intro and selected values: “Couche-tard”, “Sensibilité modérée”, “5 à 6 fois par semaine” and “5 séances par semaine”.

Format durations. Display “7 h 45 min” instead of “7h 45m”. Keep the selected values and calculations unchanged.

03 / Chronotype selection

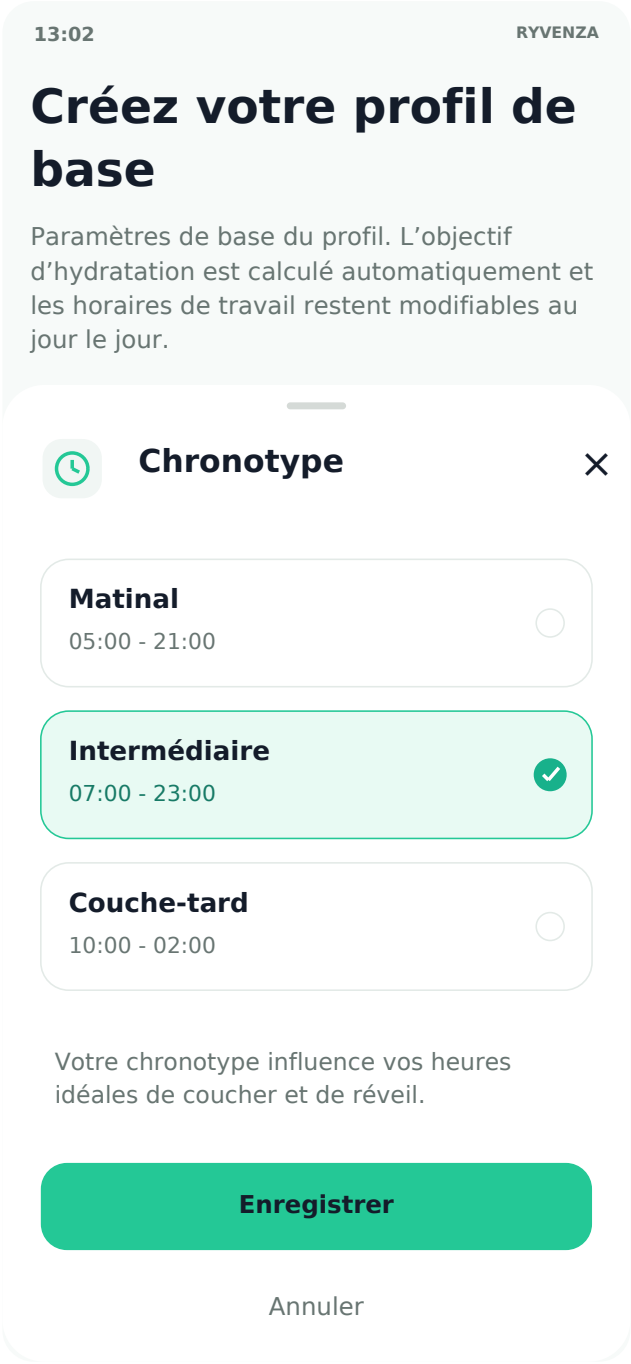

AI-assisted correction references only. Keep the current app design.

BEFORE - SUPPLIED SCREENSHOT

Source: 1000069857.jpg

AFTER - AI REFERENCE / NOT FINAL

Keep the existing design - apply listed changes

WHAT TO CHANGE

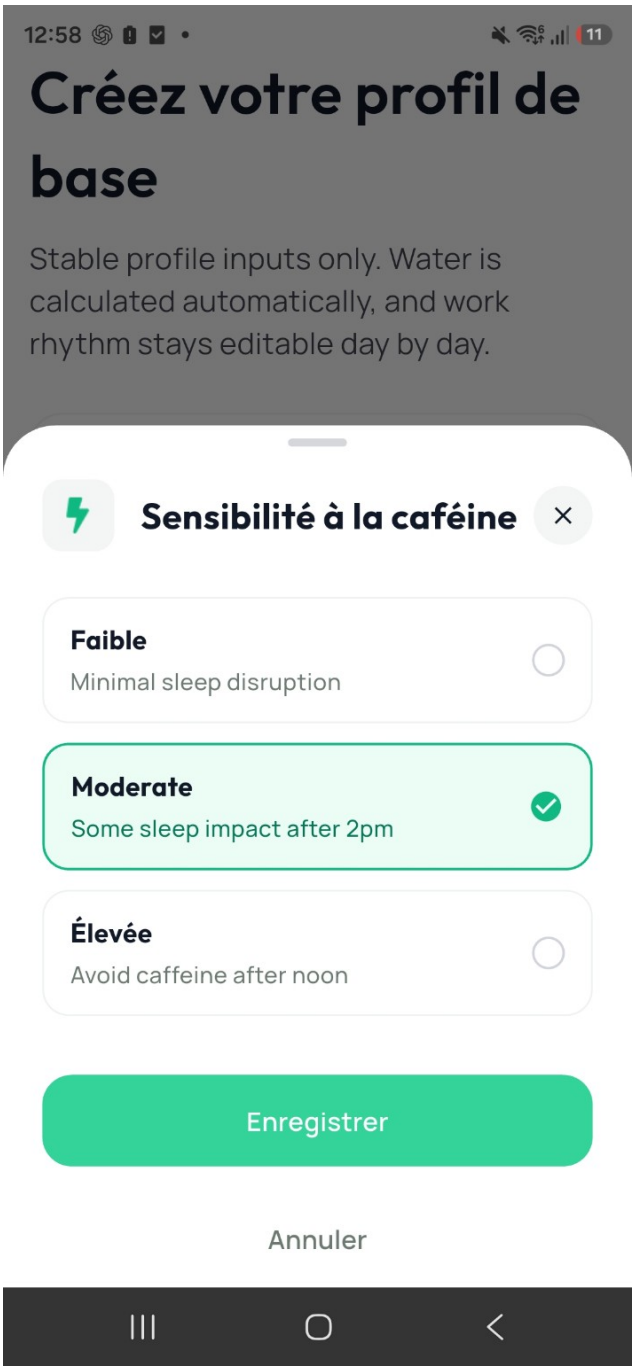

French options. Early Bird → Matinal; Intermediate → Intermédiaire; Night Owl → Couche-tard. Translate the explanatory sentence too.

Respect the chosen time format. The screenshot uses the 24-hour preference: 05:00 - 21:00, 07:00 - 23:00 and 10:00 - 02:00. Update the overview after saving.

04 / Caffeine sensitivity

AI-assisted correction references only. Keep the current app design.

BEFORE - SUPPLIED SCREENSHOT

Source: 1000069863.jpg

AFTER - AI REFERENCE / NOT FINAL

Keep the existing design - apply listed changes

WHAT TO CHANGE

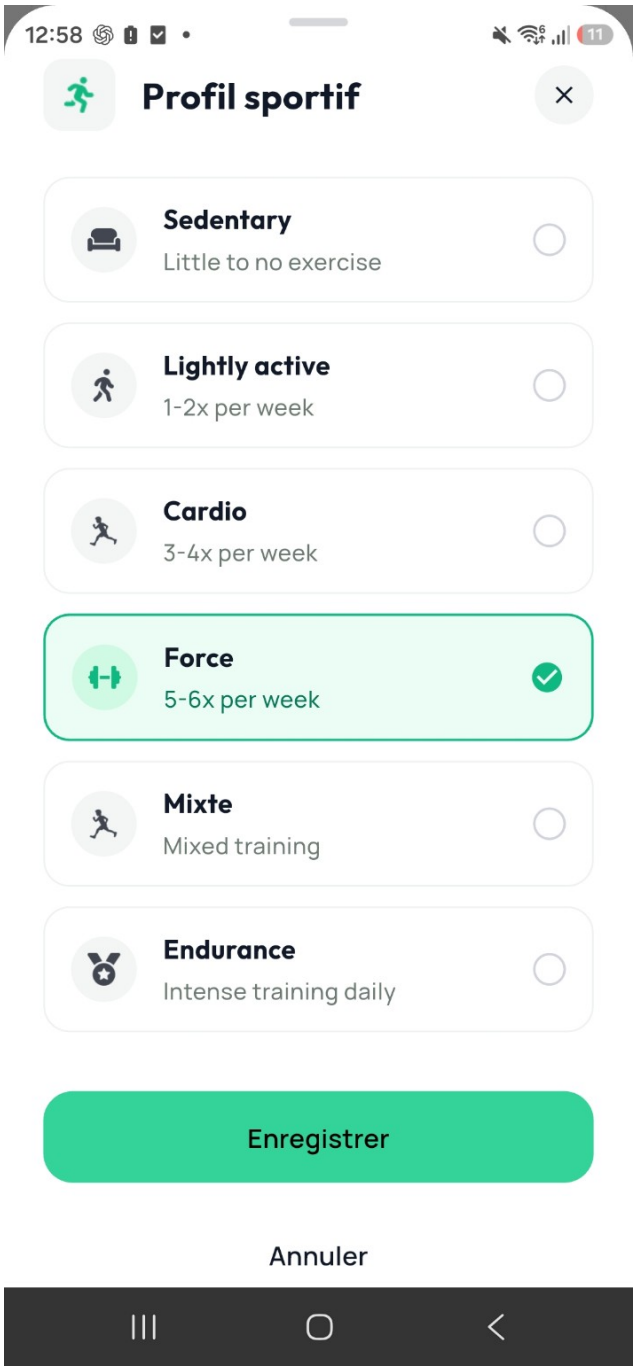

Translate titles and descriptions. Use Faible / Modérée / Élevée and the exact French descriptions supplied on page 10. The overview value is “Sensibilité modérée”.

Preserve meaning. 14:00 and 12:00 are translations of the existing 2pm/noon text. This request does not change the caffeine calculation or cut-off logic.

05 / Sports profile

AI-assisted correction references only. Keep the current app design.

BEFORE - SUPPLIED SCREENSHOT

Source: 1000069865.jpg

AFTER - AI REFERENCE / NOT FINAL

Keep the existing design - apply listed changes

WHAT TO CHANGE

Activity-level names. Use Actif / Active (3-4 per week), Très actif / Very active (5-6 per week) and Intensif / Intensive (daily). Keep Sédentaire / Sedentary and Peu actif / Lightly active, with their current meanings.

Varied training. Mixte becomes Pratique variée / Varied training. No frequency is supplied for this option: retain its existing meaning and logic. Do not infer cardio or strength training from a session count. The selected option becomes Très actif.

06 / Today’s naps

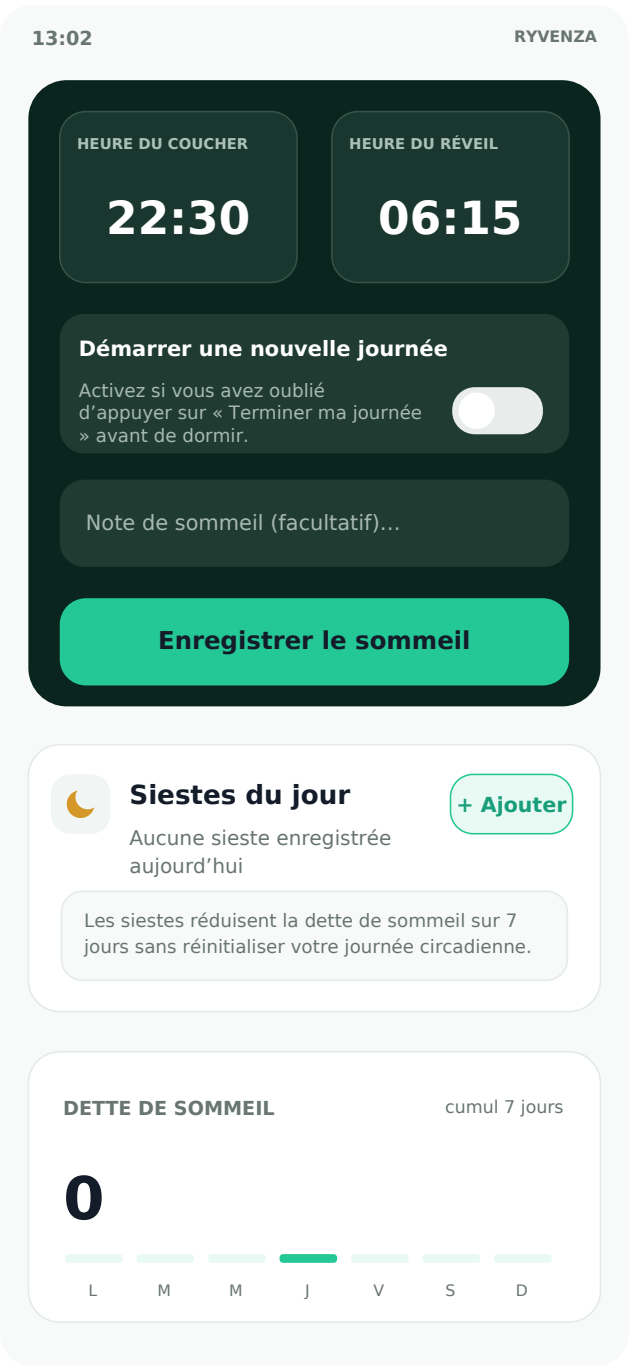

AI-assisted correction references only. Keep the current app design.

BEFORE - SUPPLIED SCREENSHOT

Source: 1000069871.jpg

AFTER - AI REFERENCE / NOT FINAL

Keep the existing design - apply listed changes

WHAT TO CHANGE

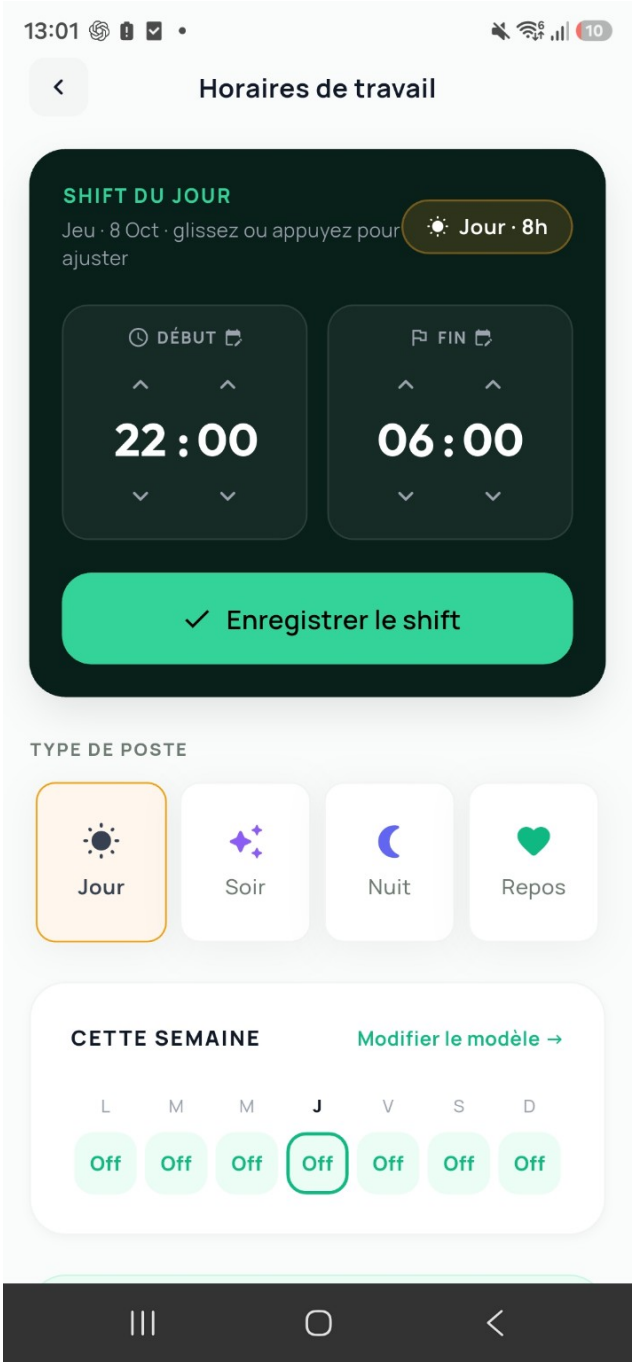

Translate the whole card. Use “Aucune sieste enregistrée aujourd’hui”, a French add action and the French explanation about 7-day sleep debt. Translate debt-chart weekdays too.

Button text. The compact mockup uses “+ Ajouter”; “Ajouter une sieste” is the full label when space allows. Logging a nap keeps its existing circadian-day behaviour.

08 / Work schedule - direct shortcut

AI-assisted correction references only. Keep the current app design.

BEFORE - SUPPLIED SCREENSHOT

Source: 1000069875.jpg

AFTER - AI REFERENCE / NOT FINAL

Keep the existing design - apply listed changes

WHAT TO CHANGE

Direct creation. Add a visible “Créer un tournus personnalisé” action on Horaires de travail. It opens the builder without editing a preset first.

Design integration. This is not the final design. Keep the current screen and propose a clean, attractive placement and style for the new action within the existing UI.

French labels. Use Repos, Poste du jour and Enregistrer le poste. Existing example hours and work type are retained.

09 / Rotation name - neutral examples

AI-assisted correction references only. Keep the current app design.

BEFORE - ENLARGED SOURCE FIELD

Source: 1000069877.jpg - enlarged custom-rotation section

AFTER - AI REFERENCE / SAME FIELD, NEUTRAL PLACEHOLDER

WHAT TO CHANGE

Replace the placeholder. “ex. Syngenta, 3x8 Novartis” → “Ex. : Mon tournus”. Do not use real company names as sample rotation names.

Zoomed field only. Focus on Créer un roulement personnalisé and Nom de la rotation. Keep the existing section, field component, optional status and design; replace only the sample text.

10 / Rotation grid - initials and editable codes

AI-assisted correction references only. Keep the current app design.

BEFORE - SUPPLIED SCREENSHOT

Source: 1000069879.jpg

AFTER - AI REFERENCE / NOT FINAL

Keep the existing design - apply listed changes

WHAT TO CHANGE

Generate from the actual names. Jour → J; Après-midi → A; Nuit → N. Remove fixed English D/E/N codes. A user-defined name must drive its own initial.

Allow a code override per day. After choosing Monday's night shift, the user can edit its small chip to DN. Other days keep N. DN is only a display code; it keeps the selected shift and hours. See page 12.

French copy reference / 1

Use these exact translations for the visible profile, chronotype and caffeine strings.

CURRENT TEXT / CONTEXT	FRENCH REPLACEMENT
Stable profile inputs only. Water is calculated automatically, and work rhythm stays editable day by day.	Paramètres de base du profil. L’objectif d’hydratation est calculé automatiquement et les horaires de travail restent modifiables au jour le jour.
7h 45m (sleep goal summary)	7 h 45 min
Early Bird Intermediate Night Owl	Matinal Intermédiaire Couche-tard
5am - 9pm 7am - 11pm 10am - 2am (24-hour preference)	05:00 - 21:00 07:00 - 23:00 10:00 - 02:00
Your chronotype affects when you should ideally sleep and wake.	Votre chronotype influence vos heures idéales de coucher et de réveil.
Faible Moderate Élevée (caffeine options)	Faible Modérée Élevée
Minimal sleep disruption	Peu de perturbations du sommeil
Some sleep impact after 2pm	Effet sur le sommeil après 14:00
Avoid caffeine after noon	Éviter la caféine après 12:00
Medium sensitivity (overview)	Sensibilité modérée
Auto: hydration goal adapts from activity sleep debt and the current day. Work schedule is edited from its own page whenever shifts change.	Auto : l’objectif d’hydratation s’adapte à l’activité, à la dette de sommeil et à la journée en cours. Modifiez les horaires sur la page « Horaires de travail » lorsque vos postes changent.

Time-format rule: use the user’s selected 12/24-hour preference for every displayed time, including descriptions. The mockups show the supplied 24-hour selection.

French copy reference / 2

Sports, naps and work rotations. Already French strings are retained unless listed here.

CURRENT TEXT / CONTEXT	FRENCH REPLACEMENT
Sedentary / Little to no exercise	Sédentaire / Peu ou pas d’activité physique
Lightly active / 1-2x per week	Peu actif / 1 à 2 fois par semaine
Cardio / 3-4x per week	Actif / 3 à 4 fois par semaine New English name: Active
Force / 5-6x per week	Très actif / 5 à 6 fois par semaine New English name: Very active
Mixte / Mixed training	Pratique variée / Entraînements variés New English name: Varied training
Endurance / Intense training daily	Intensif / Entraînement intense quotidien New English name: Intensive
5 workouts / week (weekly objective)	5 séances par semaine
No naps logged today	Aucune sieste enregistrée aujourd’hui
Log nap	Ajouter une sieste Compact button: Ajouter
Naps reduce 7-day sleep debt with zero reset to your circadian day.	Les siestes réduisent la dette de sommeil sur 7 jours sans réinitialiser votre journée circadienne.
M / T / W / T / F / S / S (debt chart)	L / M / M / J / V / S / D
Off / SHIFT DU JOUR / Enregistrer le shift	Repos / POSTE DU JOUR / Enregistrer le poste
Ajouter un shift personnalisé	Ajouter un poste personnalisé
New direct custom-rotation shortcut (point 08)	Créer un tournus personnalisé
ex. Syngenta, 3x8 Novartis (placeholder)	Ex. : Mon tournus
Visible DuPont preset / 4-week rotation of 12h day/ni...	Cycle 12 h - 4 semaines Cycle de 4 semaines, postes de 12 h

Dynamic wording: “1 séance par semaine”, “5 séances par semaine”; “1 semaine”, “2 semaines”. Match the selected value and handle singular/plural in French.

Rotation codes and acceptance checks

Required behaviour for the editable short labels, plus checks before sending the updated build.

Shift name → automatic code → optional override

SHIFT NAME	DEFAULT CHIP	EXAMPLE OVERRIDE
Jour	J	Optional user code
Après-midi	A	Optional user code
Nuit	N	Monday: DN
User-defined: Matin	M	Optional user code
Repos	Repos	Keep the rest-day label

Automatic default. Derive the uppercase initial from the current shift name. Renaming a shift updates generated initials. Existing explicit user overrides remain unchanged.

Per-day edit. Once a shift is selected for a day, make its chip editable through a small pencil or an equally clear action. Example: Monday uses Nuit, 22:00 - 06:00; the user types DN as a personal reminder.

Keep the real shift association. DN is a display label, not a new work type. Keep the shift identity and start/end times separate from the code. A Monday override does not rename all other night-shift chips.

Persistence. Save custom codes with the rotation. They must survive reopening, saved-template reuse and rotation application. Clearing an override restores the automatic initial. Allow at least two characters so DN fits.

Acceptance checks

01. With French selected, overview values, selection sheets, helper text, nap actions and weekday labels are French. Save and reopen to check consistency.

02. The selected 24-hour format applies everywhere shown, including chronotype ranges and caffeine descriptions. French labels remain French in 12-hour mode.

03. The work-page shortcut opens the custom rotation builder directly. Its final placement and styling fit the existing app design.

04. Sample rotation names contain no company examples. The optional field remains usable without a name.

05. Jour / Après-midi / Nuit generate J / A / N. A Monday DN override persists, keeps its hours and leaves other night days as N.

06. FR/EN sports names match: Actif/Active, Très actif/Very active, Pratique variée/Varied training and Intensif/Intensive. Preserve frequencies and calculations.
