History: overview

Period-based statistics - approved layout, navigation and data rules

Selected layout - illustrative values.

01 Navigation and period

Title: **History** (Historique). Keep **My day on the left** and **Overview selected on the right**. Offer 7 days, 30 days, 90 days and 1 year. Arrows move by one selected period; the calendar sets its end date. Refresh every card and chart for that range. Allow vertical scrolling and keep the bottom navigation.

02 Main scores and comparisons

Show **Global rhythm** and **Circadian stability** in two summary cards. Reuse existing scoring and aggregation logic. Compare with the preceding equivalent period. Show differences in **percentage points**: 72% versus 67% = +5 pts. Update the comparison caption with the selected duration; show the correct direction for increases, decreases or no change.

03 Evolution and domain indicators

Plot rhythm evolution on a **0-100% scale**. Tapping a point reveals its date and score; reduce axis-label density for longer ranges. Keep six slim-bar indicators: **Sleep, Hydration, Caffeine, Nutrition, Exercise and Work readiness**. All values use the selected range and existing metric definitions.

04 Sleep and naps

Group data by the same logical day as My day: **main-sleep start to next main-sleep start**; filter by its start date. Stack **main sleep in emerald** and **naps in light mint**. Show mean total sleep per completed, recorded day and the nap count for those days. Tapping a bar shows its date, main sleep, naps and total duration.

05 Style and missing data

Keep white cards, dark headings, dark navy secondary text and emerald graphics. Scale charts from real values. Missing days are gaps, not zeroes; exclude them from averages. Indicate available-day coverage when incomplete. Show "No data" or an em dash when a value or comparison is unavailable.

Implementation note: The screenshot is a visual reference. Do not hardcode its values or infer scoring formulas from it. Render charts from the actual calculated data.
